

Fix details for ADBP-6197:

1.If keycloak is enable change the below mentioned changes in keycloak app.

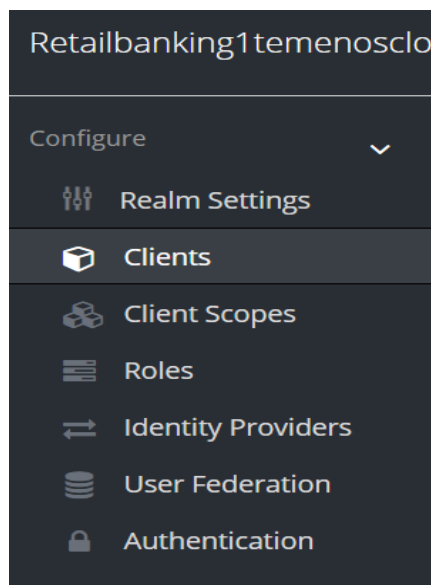

1. in admin console, go to Authentication
2. make a copy of Browser flow
3. in this new flow, disable or delete Cookie
4. go to Clients -> (your client) -> Authentication Flow Overrides, change Browser Flow to your new flow, click Save."

2. For reference find the below screen shot.

The screenshot shows the Keycloak administration console's 'Flows' configuration page. The left sidebar contains navigation options: Configure (Realm Settings, Clients, Client Scopes, Roles, Identity Providers, User Federation, Authentication), and Manage (Groups, Users, Sessions, Events, Import, Export). The main panel is titled 'Flows' and includes tabs for Bindings, Required Actions, Password Policy, OTP Policy, WebAuthn Policy, and WebAuthn Passwordless Policy. A 'CIBA Policy' section is also visible. A table lists various authentication flows, with 'Copy Of Browser11' selected. The table columns include Auth Type, Requirement, and Actions. The 'Copy Of Browser11' flow is highlighted, showing its configuration details.

Auth Type	Requirement	Actions
Cookie	<input type="radio"/> REQUIRED <input type="radio"/> ALTERNATIVE <input checked="" type="radio"/> DISABLED	Actions
